GLOBAL AI OPEN COMPUTE FACULTY DEVELOPMENT PROGRAM

Cooperation Guide

A Complete Guide to the Cooperation Agreement, Partnership Model, Resource Application, and the FlagOS Online Laboratory

Sign · Cooperate · Apply · Teach — from Beijing to your campus

Beijing Academy of Artificial Intelligence (BAAI) · With AU–ASRIC, Peking University Renming University & UNDP · 2026

程

HOW THIS GUIDE IS ORGANIZED

The Four-Step Journey

壹 · SIGN

Sign the Cooperation Agreement

Execute the BAAI–University agreement for Phase 4, designate focal points, and register with AU–ASRIC.

貳 · COOPERATE

Run the Partnership

BAAI, your university and AU–ASRIC each play defined roles across the five program phases.

叁 · APPLY

Apply for Computing Resources

Submit the Course Execution Plan and per-experiment requests on a Request–Review–Grant–Release cycle.

肆 · TEACH

Teach on the Online Laboratory

Deliver your AI course with cloud GPU/NPU labs — reservation slots, SSH / IDE access, multi-chip environments.

One agreement, one partnership, one resource workflow, one teaching platform.

This guide walks through each step using the official Cooperation Agreement, the program introduction, and the Online Laboratory user documentation.

PART ONE

Signing the Cooperation Agreement

Phase 4 — launching AI courses at your university, supported by BAAI infrastructure

契

契

PART ONE · THE AGREEMENT

What the Cooperation Agreement Covers

THE FRAMEWORK · 框架

Parties. The Beijing Academy of Artificial Intelligence (BAAI) and your university.

Auspices. An African Union–led initiative under AU–ASRIC & UNDP; the university registers its participation and reports progress to AU–ASRIC or UNDP.

Purpose. Governs Phase 4 — faculty trained in China formally launch AI courses at home, supported by BAAI's technical infrastructure.

Scope. Covers computing resources, platforms, datasets and course materials ("Cooperation Resources") for the approved AI courses only.

Supersedes. Replaces any prior memorandum of understanding on the initiative.

KEY FACTS · 要义

Term	4 years from the date of last signature (Art. 17)
Renewal	By mutual written consent, via signed amendment
Execution	In counterparts; electronic copies accepted
Language	English version prevails over any translation
Nature	Non-profit, non-commercial education & research only
Cost	All BAAI support is free of charge; no financial obligations
Disputes	Negotiation, then Beijing Arbitration Commission (BAC)

How to Sign — Five Steps

1 · Review the agreement and appendices

Read the 17 articles plus Appendix 1 (Action Plan), Appendix 2 (Instructor Access Form) and Appendix 3 (Per-Experiment Request Form).

2 · Designate your focal point

Name the university contact person and email (Art. 14). All official communication is in English; keep contact details current.

3 · Execute in counterparts

Both authorized representatives sign; electronic copies are accepted. The agreement takes effect on the date of the last signature.

4 · Register with AU–ASRIC & UNDP

Register participation and report progress under AU/UNDP guidelines (Art. 2); provide evidence to BAAI upon request.

5 · Prepare the Phase 4 Course Execution Plan

Submit at least 30 calendar days before your intended course start date — this plan is the gateway to computing resources (Part Three).

SIGNING CHECKLIST

- ☐ Agreement signature pages signed by both parties
- ☐ Focal-point names and emails filled in (Art. 14)
- ☐ AU–ASRIC/UNDP registration evidence on file
- ☐ Phase 4 Course Execution Plan drafted (course identity, timeline, faculty, level, enrollment, resource plan)
- ☐ Appendix 2 — instructor semester access form
- ☐ Appendix 3 — one form per student experiment

Note: no financial commitment is created by signing — BAAI support is provided free of charge.

诺

Commitments on Both Sides

YOUR UNIVERSITY COMMITS TO

Non-commercial use — resources serve non-profit education and research only; no fee-charging courses or commercial training (Art. 3).

Open licensing — course materials built with BAAI support are released under CC BY-NC 4.0, irrevocably, with the license notice displayed (Art. 5).

Reporting — Course Execution Plan, enrollment updates, interim reports each semester, and a final course report within 45 days (Art. 4).

Compliance & security — no reverse engineering, resale, or transfer of access; lawful use; data protection and 48-hour incident notice (Arts. 7, 9, 11).

BAAI PROVIDES

Platform access — computing resources (GPU/NPU nodes, storage, datasets, libraries) within approved usage windows, with automated provisioning and de-provisioning (Art. 6.1).

Technical & instructional support — remote troubleshooting, resource guidance, and pedagogical consultation by agreement (Art. 6.2).

Resource allocation — capacity for the approved windows; BAAI may adjust allocations to system availability with advance notice (Art. 6.3).

Free of charge — no financial obligations on either side (Art. 6.4).

戒

Compliance red line: any commercial use of Cooperation Resources is a material breach. BAAI may issue a warning, suspend access, terminate the agreement and claim liquidated damages of USD 5,000 (Arts. 3.5, 15). Unresolved disputes go to the Beijing Arbitration Commission; the award is final and binding (Art. 16).

PART TWO

The Cooperation Framework

Roles, phases and shared responsibilities across the initiative

协

协

PART TWO · COOPERATION

Three Partners, One Mission

BAAI
Beijing Academy of Artificial Intelligence

· Provides the FlagOS open software stack and Online Laboratory platform

· Delivers the two-week in-China training curriculum with hands-on labs

· Issues invitation letters and coordinates government visa support

· Reviews and approves Course Execution Plans and resource requests

· Allocates computing resources; monitors utilization and course quality

· Offers remote technical and instructional support, free of charge

YOUR UNIVERSITY
Partner institution & course host

· Nominates faculty and supports their Phase 3 training in China

· Launches or upgrades at least one AI compute course (Phase 4)

· Submits the Course Execution Plan and per-experiment requests on time

· Ensures faculty and students comply with non-commercial use

· Publishes course materials under CC BY-NC 4.0

· Reports progress: interim reports and a final course report

AU–ASRIC /UNDP
African Union Scientific Research & Innovation Council / UNDP

· Leads the initiative under the African Union / UNDP

· Issues the open call for nominations across member states

· Jointly evaluates and shortlists candidates with BAAI

· Receives university registration and progress reports

· Undertakes quality assurance and follow-up management of teaching outcomes

· Coordinates the signing ceremony and cohort expansion

Initiative Roadmap — Five Phases (Cohort one as example)

PHASE 1

Nomination & Selection

Jan–Feb 2026

Open call for 20 candidates; joint BAAI–ASRIC shortlist by Feb 28.

PHASE 2

Visa Processing

By Mar 31, 2026

BAAI invitation letters + official government letters; professors apply and report status.

PHASE 3

In-China Training

Two weeks from Apr 14, 2026

Full-stack AI systems curriculum, hands-on labs, culture experience, company visits.

PHASE 4 · YOU ARE HERE

Course Launch in Africa

From Sep 2026

Trained professors teach AI courses at home, with BAAI platform & resources.

PHASE 5

Review & Next Cohort

From Aug 2026

Full review, revised framework, and preparation to train 20 more professors.

Track Two — the Signing Ceremony was held alongside the program in Beijing on April 22, 2026.

Source: Cooperation Agreement, Appendix 1 — Action Plan

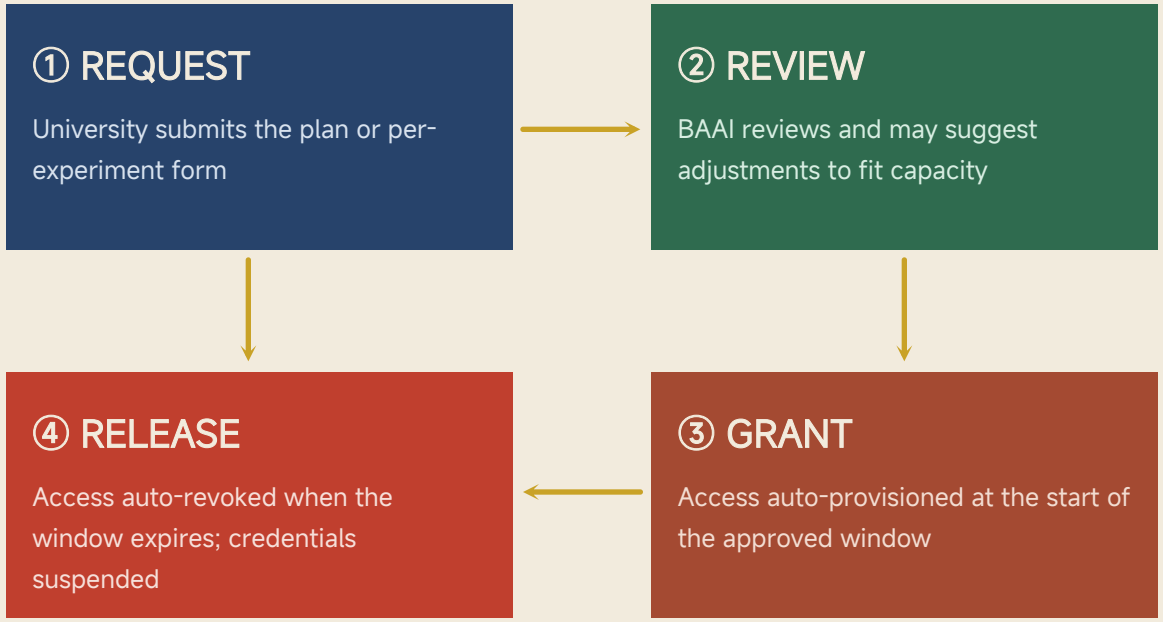

PART THREE

Applying for Computing Resources

Request · Review · Grant · Release — the resource access cycle

算

The Request–Review–Grant–Release Cycle

No ad-hoc access: intermittent use outside approved experiment windows is not granted. Each window is a separate allocation — approval of one does not guarantee the next (Art. 4.5).

KEY DEADLINES · 时限

30 days — submit the **Phase 4 Course Execution Plan** before the intended course start date (Art. 4.3.1).

10 days — submit each **Per-Experiment Resource Request** (Appendix 3) before the experiment start.

10 days — update **actual enrollment** after the final enrollment deadline.

45 days — deliver the **Final Course Report** after each course offering concludes.

1 per semester — minimum frequency for **Interim Progress Reports** (or upon BAAI request).

Missing a deadline, then failing to correct within **15 days** of written notice, is a material breach (Art. 4.4).

Source: Cooperation Agreement, Art. 4.3 & 4.5

Two Access Tracks — Plan Both in Your Course Plan

	INSTRUCTOR CONTINUOUS ACCESS	STUDENT EXPERIMENTAL ACCESS
Who	Faculty teaching the approved course	Enrolled students, per hands-on experiment
Form	Appendix 2 — Instructor Semester-Long Access Request	Appendix 3 — Per-Experiment Resource Request
Submit	With the Course Execution Plan, ≥30 days before course start	≥10 calendar days before each experiment window
Pattern	Low-quota, full-semester access (e.g. 1–2 GPU cards, limited storage)	Discrete, time-bound windows aligned to each experiment
Purpose	Syllabus preparation and in-class demonstrations	Hands-on lab work; list student accounts or estimated count
Lifecycle	Runs for the semester start/end dates declared	Auto-provisioned at window start, auto-revoked at expiry

Capacity note (Art. 6.3): GPU/NPU type and quantity are determined by BAAI based on resource availability and experiment requirements. BAAI may adjust or cap allocations with advance notice, and will work with your university to minimize disruption to course delivery. Describe in each Appendix 3 request how the experiment relates to FlagOS components.

PART FOUR

Teaching on the Online Laboratory

From first login to a running multi-chip lab — flagos.net

教

登

PART FOUR · ONLINE LABORATORY

Getting Started on the Platform

Log In in Four Steps

1. Open **flagos.net/Home** in your browser and click **Online Laboratory** at the top.
2. Choose **Phone Login** or **Email Login** and enter your phone number or email address.
3. Click **Get Verification Code** and enter the code you receive.
4. Accept the community usage agreement and privacy policy, then click **Login / Register Now**.

Your dashboard shows all unreleased container instances, reservation information, and access endpoints tied to your account.

Two Modes — Check Your Sidebar

Reservation Mode

If you see a **My Bookings** menu in the left sidebar, your instance runs in reservation mode: you book fixed time slots with vouchers.

→ See the next page.

Dedicated Mode

Without **My Bookings**, your instance is dedicated: start it from the Container Instance page, check the image under Settings → Image, and connect directly.

→ Access options on page 17.

Teaching tip: have every student complete login and locate their container instance before the first lab session.

Source: Online Laboratory User Guide — docs.flagos.io

Reservation Mode — Booking Compute Slots

Four Fixed Slots per Day (Beijing Time)

00:00 – 06:00	06:00 – 12:00	12:00 – 18:00	18:00 – 24:00
Night slot · 1 voucher	Morning slot · 1 voucher	Afternoon slot · 1 voucher	Evening slot · 1 voucher

BOOKING RULES

· Book via **Container Instance → Actions → Reservations**; confirm slots under **My Bookings**.

· Slots open **7 days** in advance; consecutive reservations are supported without shutdown in between.

· Booking closes **15 minutes** before each slot starts — no real-time reservation.

· Cancel any time **before** the slot starts and the voucher is refunded; unused slots are not refunded.

· Group administrators can book for the class; conflicting personal bookings are auto-cancelled and refunded.

WHAT HAPPENS IN A SLOT

Start of slot — the container is pre-warmed and allocated automatically; click **Start** to enter.

End of slot — the system saves the container's contents and shuts it down automatically.

Release time — when the voucher's release time arrives, the container is released and its data destroyed.

⚠ **Always keep a local copy of your data** — download code and results before the release time.

境

PART FOUR · ONLINE LABORATORY

Working in the Cloud Development Environment

Option 1 · SSH

Create a key pair on your computer → SSH Login → Key Management → Add Public Key, paste the key, name it and submit. Edit or delete keys anytime.

Option 2 · Enter IDE

Copy the Secret Key in the Quick Development column, click Enter IDE, paste the key in the Welcome dialog and submit — a VS Code environment opens.

Option 3 · Public URL

Settings → Action → More Access → Service URL: map your service to port 30000 and open the development environment from a public network.

Check the Hardware

In the terminal, query the accelerator by card type:

`ixsmi` for Iluvatar GPU cards

`npu-smi info` for Huawei Ascend NPU cards

Move Files In and Out

Right-click your **Workspace** → **Upload…** to bring in code packages and datasets.

Right-click → **Download…** to take results back to your local machine.

慎

Two irreversible moments: (1) the containerized environment is permanently deleted on release — back up locally in advance; (2) Settings → Action → **Reset Environment** restores the initial state and erases all data — confirm with care. For editor details see the VS Code documentation.

JOIN THE PROGRAM · 加入我们

Teaching Community

Shared principles. Connected teaching resources.

01 | COMMUNITY PRINCIPLES

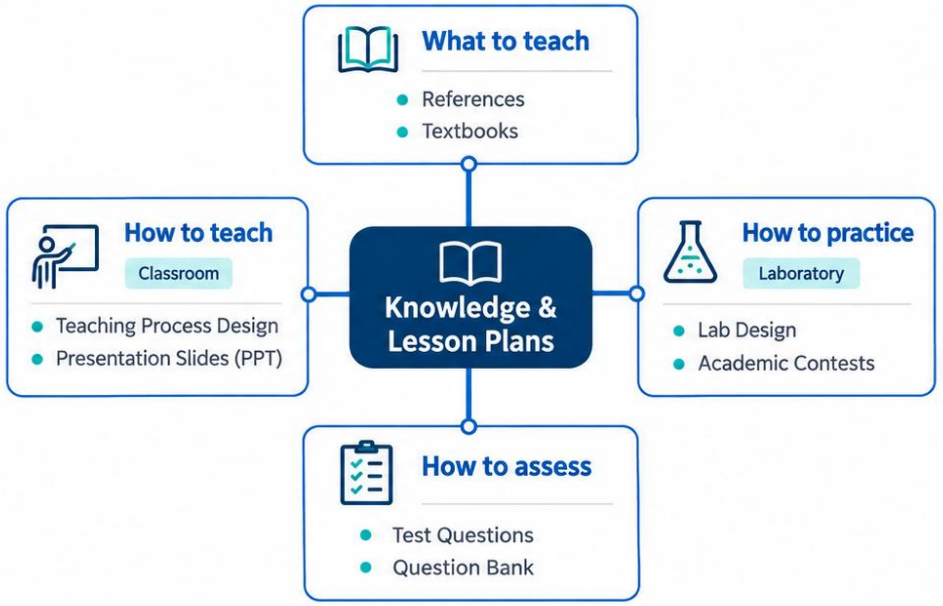

01 Openness
- Operate as an open-source teaching community.
- Welcome schools beyond the initial applicants.

02 Contribution
- Support one another.
- Value the spirit of volunteering.

03 Competition
- Place less emphasis on institutional identity.
- Recognize contributions and outcomes.

04 Governance
- Make decisions democratically.
- Follow the Mulan license.

02 | TEACHING RESOURCE FRAMEWORK

智

Bring an AI compute course back to your university.

flagos.net · docs.flagos.io · FlagOS Community

Teaching community 教学社区

From Beijing to Your Campus

A Path Already Walked

After completing the China–Africa AI compute faculty program, **Kedir Yassin Hussen** of the University of Gondar, Ethiopia, carried the curriculum home.

In May 2026 he ran a six-day campus training — *"End-to-End AI Systems: From Infrastructure to LLM Training and Inference"* — for local faculty and students, built on FlagOS heterogeneous computing resources and the BAAI–ASRIC course system.

His later research on efficient AI deployment for aging data centers in the Global South won a **Best Paper Award** (lightning talk) at the ICML 2026 Global South ML Workshop.

Three Application Channels

Africa	**Via AU–ASRIC.** Two cohorts per year — April–May and September–October.
Global	**Via UNDP.** For faculty in the Global South; one cohort per year, September–October.
China	**University faculty workshops.** Public welfare training with Peking University & RUC; winter and summer sessions.

Apply through your partner channel or the program's online form — international applications are collected in one form; note your source channel.

Bring an AI compute course back to your university.

PART FIVE

Open Course

Build the Course Together — https://github.com/flagos-ai/OpenCourse

教

Open Course Ecosystem 开源课程仓库现状

One Course, Multiple Editions

Standardized Dual-Track Repository Structure

The FlagOS OpenCourse project enforces a clean separation between foundational courseware and customized delivery instances.

course/

Contains canonical source files, standard lecture decks, core system labs, and reference AI acceleration material maintained by core developers.

editions/

Houses localized university semester snapshots, specific partner workshop packages, and tailored fast-track training decks.

Repository Structure Overview

course/	**Canonical Curriculum Source** Lectures 01–12, standard labs, hardware setup scripts, and unified slides.
editions/	**Tailored Delivery Instances** University term snapshots (e.g. PKU, RUC) & special AI faculty workshops.
docs/	**Teaching & Contributor Guides** Instructor notes, lab grading guides, and setup documentation for contributors.

* All additions and modifications undergo automated linting and peer review before merging into the main line branch.

Technical Evolution 技术规划与维护演进

A More Maintainable Course Workflow

Future Roadmap: Transition to Typst

To overcome the bottleneck of binary PPTX files in Git-based collaborative environments, we are planning a strategic migration toward **Typst** as our core typesetting engine.

Text-Based Source Files

Allows line-by-line code review, git diff tracking, and lightweight binary-free history storage.

Automated CI/CD Compilation

Automatically build crisp PDF slides, lecture notes, and student handouts upon every merged PR.

Key Advantages of Technical Upgrade

Version Control	**Git-Native Collaboration & Diffs** Track every formula edit, code update, and slide revision clearly without binary merge conflicts.
Modular Design	**Reusable Component Library** Define standard code blocks, math equations, and hardware architecture diagrams once; reuse across all editions.
Multi-Target Export	**Single Source to Multi-Formats** Compile one source repository directly into high-res presentation PDFs, printable notes, or web docs.

* Note: Typst integration represents our technical roadmap. Existing PPTX releases remain fully supported during the migration phase.

Community Participation 如何参与课程建设

Everyone Can Contribute

Co-Building an Open AI Curriculum

Whether you are a university professor, an AI systems developer, or a student enthusiast, your input directly shapes the future of AI education.

For University Faculty

Share classroom feedback, localized slide translations, or specialized hardware lab exercises.

For Industry Engineers

Contribute real-world AI cluster profiling data, cutting-edge kernel optimization examples, or bug fixes.

Three Easy Ways to Get Started

Issue Tracker

Report Errata & Suggest Topics

Spot a typo in the slides, an outdated API in the labs, or want to request a new LLM training topic? Open a GitHub Issue.

Pull Request

Submit Direct Improvements

Submit PRs for slide refinements, code updates, or missing installation steps. Simple text edits are warmly welcomed.

Peer Review

Participate in Discussions & Reviews

Help review community submissions, answer student questions in Discussions, and test lab code on various hardware.

** A comprehensive **Contributor Guide** with detailed PR formatting and lab testing rules will be published in the docs/ directory.*

Join the FlagOS OpenCourse Community

智

Discuss · Issue · PR · Review

Every contribution helps make AI computing education open to all

Community Vision 社区共建与展望

Build the Course Together

Sustaining an Open, High-Quality Curriculum

Our ultimate goal is to maintain a world-class, up-to-date AI systems curriculum that bridges academia and industry globally.

Contributor Recognition

All merged PR authors are formally recognized in release credits, course website badges, and community announcements.

Global Academic Impact

Empowering university faculty across Asia, Africa, and the Global South with state-of-the-art AI infrastructure teaching materials.

Join the Movement Today

Star & Fork

Star the GitHub Repository
Visit flagos-ai/OpenCourse, star the repo, and fork it to create your customized course edition.

Adopt in Campus

Bring FlagOS Course to Your University
Leverage our slides and heterogeneous computing labs for your local AI systems classes.

Connect & Share

Engage with FlagOS Community
Participate in instructor workshops, share teaching feedback, and co-author future editions.

Bring an AI compute course back to your university.
